Paired mesh values
(a)
fine mesh
coarse mesh
Maximum gate utilization
(b)
interp. operator
interp. spectrum
tail $S = 2$
trunc. operator $S = 2$
trunc. spectrum $S = 2$
total operator $S = 2$
total spectrum $S = 2$
pass boundary
change / tolerance
Final-mesh qualified cases
(c)
qualified cases out of 16
identity
global
pointwise
oracle
Residual decomposition defect
(d)
maximum normalized defect
Sampled Pareto support counts
(e)
nondominated supports per case
Pointwise–oracle agreement
(f)
absolute difference
frame recovery
$S = 2$ spectral consequence
exact zero (display floor)
rank/depth case index
