(a)
External gap
minimum sampled gap / E_{ref}
gate
parent scale ρ
(b)
Transport singular value
minimum singular value
gate
parent scale ρ
(c)
Final momentum changes
maximum adjacent-mesh change
parent invariant
outcome channel
draft target
parent scale ρ
(d)
Amplitude midpoint defects
maximum midpoint defect
correlation
operator threshold
non-onsite weight
block power
draft target
uniform amplitude intervals
(e)
Support-decision stability
changed decisions out of 165
reference band
comparison band
reference matrix
comparison matrix
0 changes for every channel
128→256
256→512
construction-mesh refinement
(f)
Independent reconstruction
maximum verification discrepancy
verification tolerance
construction mesh size
