
Post-hoc τ_1–τ_2 feasibility map: RMS losses
proper native Wigner–Seitz shell reductions only
producer-checked development; not independently verified
requirements of each proper reduced shell
minimum retained support witness
required RMS operator threshold τ_2
required RMS spectral threshold τ_1
post-hoc operator threshold, τ_2
post-hoc spectral threshold, τ_1
minimum included Wigner–Seitz representatives
gray: no proper reduced shell satisfies both
