
(a)
Sampled thresholds
minimum operator
exact-spectrum joint
normalized threshold
rotation amplitude a
(b)
Sampled non-onsite weights
reference
comparison
non-onsite weight
rotation amplitude a
(c)
Sampled range redistribution
absolute displacement $|R|$
rotation amplitude a
$\log_{10}$ normalized weight
(d)
Selected cumulative tails
weight outside $|R| \le R_{\max}$
reference
comparison, $a = \pi/8$
comparison, $a = \pi/4$
retained range $R_{\max}$
(e)
Momentum: converged
maximum refinement change
largest parent-invariant change
largest outcome change
draft 1.01×10^{-8}
fine momentum mesh N
(f)
Amplitude: unresolved
maximum midpoint defect
operator
joint
hopping block
draft 1.01×10^{-8}
amplitude intervals N_a
